

VERY FAST

Very low water
needs

Drought resistant

Heat tolerance

CYNODON DACTYLON

GOBI

- New mediterranean variety with semidwarf growth habit.
- Upright growth and short internodes.
- Unbeatable drought and salt tolerance.
- Uses 20% less water than TIFWAY 4-19 bermudagrass.
- Fast establishment and easy recovery ability.
- Less thatchy compared with other hybrid bermudagrass.
- Wear tolerant.
- Less winter dormancy than common varieties.
- Well suited to be mixed with other bermudas or cool season grasses to save water.
- Available seed hulled and coated in order to ensure fastest and uniform establishment.
- Ideal for home lawns, parks, sport fields, racetracks..., where there is a lack of water.

TURF PERFORMANCE SCORES

Seeding rate g/m ²	10-15
Overseeding rate g/m ²	10
Seeds per gram	2.200
Days to germination with 30°C	5
Recommended planting dates	Summer
Color	Medium
Establishment/Green up	Very fast
Growth	Medium
Leaf texture	Medium
Maintenance needs	Low
Fertilizing needs	Low
Nitrogen answer	High
Shade tolerance	Low
Winter dormancy	Below 12°C
Disease resistance	Spring dead spot
Spreading ability	Stolons and Rhizomes
Recovering capacity	Excellent
Wear tolerance	High
Heat tolerance	Excellent
Mowing height	From 15 mm
Mowing frequency	Medium
Salt tolerance	High
Drought tolerance	Excellent
Irrigation needs	Low
Endophyte enhanced	No

MANAGEMENT

- Sowing time with 18°C in the soil at 10 cm depth growing up.
- Bury the seed at 5 mm depth in two crossed directions.
- Irrigate smoothly and separately until plant is established.
- Mowing height from 10 mm although it is better above 15mm.
- High N needs in summer time.
- Spray chemicals only if it is necessary.
- Winter overseeding recommended with REPOBLADOR mixture at 50 g/m² to keep grass growing in winter time in case that is needed.
