

7 days after seeding

FAST ESTABLISHMENT WITH LOW TEMPERATURES

1 week of implantation

Traffic tolerance

Fine leaf texture

Does not tolerate heat

MIXTURE FOR OVERSEEDING FAST

- Formula that combines a cespitose *Lolium multiflorum* of dwarf characteristics with a high quality *Lolium perenne*.
- Germination starts on land at 3°C and establishes very fast.
- Maximum traffic tolerance.
- When summer arrives, the mixture transitions naturally and the annual raygrass disappears smoothly and progressively without herbicide application.

Uses: Ideal for reseeding on cold climate species (C3) to cover bald spots or for overseeding on warm climate species (C4) in autumn where a progressive transition without herbicides is desired. Tees and streets for golf, football, equestrian, tennis, gardening...

COMPOSITION FAST	% WEIGHT	% SEED COUNT
<i>Lolium perenne</i> SUN	50%	60%
<i>Lolium perenne</i> THUNDER	50%	40%

Packaged: 25 kg

CHARACTERISTICS	
Seeding rate g/m ²	30-40
Overseeding rate g/m ²	50
Seeds per gram	508
Days to germination	3-7
Recommended planting dates	Fall - Winter - Spring
Color	Dark
Establishment rate	Very fast
Growth	Fast
Leaf texture	Fine
Spreading activity	No
Maintenance	Medium-high
Fertilizing needs	High
Shade tolerance	Low
Winter dormancy	No
Disease resistance	High
Recovery capacity	Excellent
Traffic tolerance	Excellent
Heat tolerance	Medium-low
Mowing height	10-20 mm
Mowing frequency	High
Irrigation needs	High
Salt tolerance	Medium
