

FOR DROUGHT AND SALINITY CONDITIONS

Very low water requirements

Establishment in 3 weeks

Excellent tolerance to salinity

Low maintenance needs

Excellent tolerance to diseases

Excellent tolerance to heat

Excellent tolerance to traffic

Sustainable turfgrass

CÉSPED COSTA

- Specific mixture for Mediterranean coastal areas or warm inland regions.
- Saves up to 50% irrigation compared to traditional lawns. Its *Festuca arundinacea* base prevents winter dormancy.
- Excellent recovery after periods without irrigation.
- Tolerates full sun, partial shade, heat, drought, and salinity.

Uses: Equestrian sports, polo, golf course rough, low-maintenance landscaping, and maximum rusticity in coastal situations.

COMPOSITION	BY WEIGHT	BY SEED NUMBER
<i>Festuca arundinacea</i> BIZEM	35%	19%
<i>Festuca arundinacea</i> MÉRIDA	35%	19%
<i>Poa pratensis</i> PRAFIN	10%	30%
<i>Lolium perenne</i> SUN	10%	7%
<i>Cynodon dactylon</i> GOBI	10%	25%

Available packaging: 1 kg, 5 kg, 25 kg.

CHARACTERISTICS

Seeding rate	25-35 g/m ²
Overseeding rate	50 g/m ²
Seeds per gram	906
Germination	7-15 days
Ideal sowing time	Late spring-summer
Colour	Dark green
Establishment vigour	Medium
Growth	Slow
Leaf texture	Medium
Lateral growth	Yes
Maintenance	Low
Nutritional requirements	Very low
Shade tolerance	Medium
Winter dormancy	No
Disease resistance	Excellent
Recovery capacity	Excellent
Traffic tolerance	Excellent
Heat tolerance	Excellent
Mowing height	From 25 mm
Mowing frequency	Low
Water needs	Very low
Salt tolerance	Excellent
